

# Chess Android Application User Manual (<http://goo.gl/p4YK63>)

## Running the Application

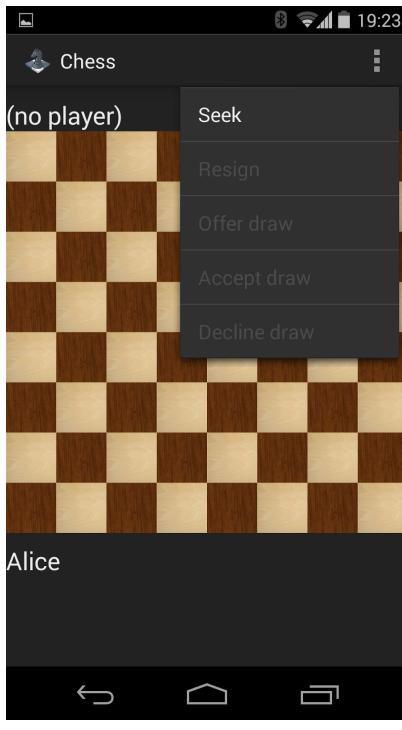

In order to run the application, touch the application icon in the application menu.

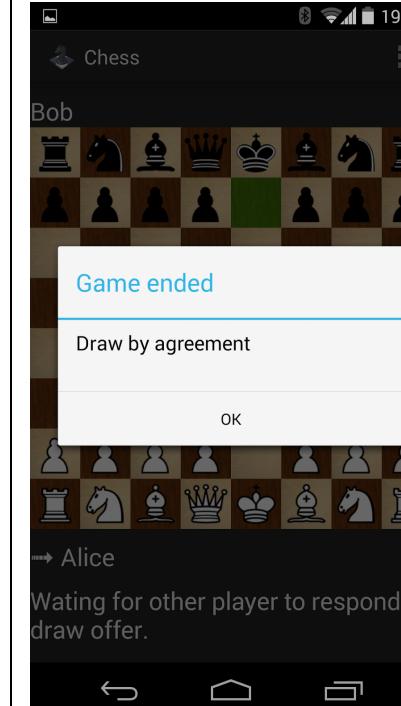

## The Login Screen

1. Enter the server address. This will most likely be of the form <code>http://&lt;ip&gt;:8080/Server/chess</code>	2. Enter a username. This can be any name you want. It will be used as your display name.	3. Click 'Login'. If the server address is OK, you will be logged in, and the game screen will be shows. Otherwise, check the server address.
		

## The Game Screen

<p>In the game screen, use the menu in order to seek an opponent for a game.</p>	<p>When an opponent is matched, the game begins, the pieces and player names appear. The player whose turn to move is marked by an arrow.</p>	<p>In order to make a move, click on the piece you want to move. The legal moves will be highlighted in yellow.</p>	<p>After a move was made, the move is highlighted in green. Notice that the player marker moved to the other player, indicating it's their turn.</p>
			

## The Game Screen (Cont.)

When the other player makes a move, the move automatically appears, and is highlighted in green (and the player marker moves back).	During the game, use the menu if you want to resign or offer draw.	After offering draw, a message will appear. You can make a move while the message is there, but it will withdraw the offer.	If the opponent agrees, the game ends in a draw. If they decline, the message will disappear.
			

## The Game Screen (Cont.)

If the other player offers draw, you will get a message, and the Accept and Decline draw menu options will become available.

After the game is over, when you click OK, the board will reset, and you will be able to seek a new opponent, just like after logging in.
